

# KC Salon & Spa

an intelligent bookings management system

## Full integration with KCPOS

**KCPOS**  
integrated epos technology 

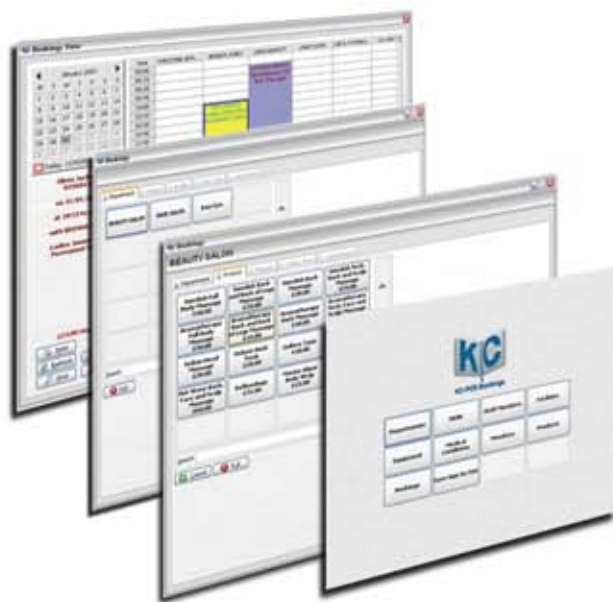

Manage every aspect of running your Salon, Hairdressers, Gymnasium, Spa, or Beauticians with an integrated booking system specifically enhanced for any industry that takes bookings and provides services. If your industry allows clients to make appointments and book products, KC Salon & Spa can help. Fully integrated with KCPOS till systems, KC Salon & Spa is a fast, simple and efficient way to manage your staff's time and appointments, as well as equipment, products and items required for appointments.

Key benefits of KC Salon & Spa:

- Full staff, equipment and facilities management
- Membership Schemes that keep track of clients usage history of areas visited, facilities used and products used
- Full Medical Details records for members: any supplied medical details are stored against the member. If certain treatments are not recommended for a clients medical condition, the system will alert you
- Product Bookings: Checks availability of the required staff, rooms and equipment for each product
- Staff Diaries: Bookings made automatically reserve the time on the date required for that treatment.
- Peak Times Option: Specify Peak and Off-Peak times and set pricings accordingly for individual products or types of membership
- Departments definition with own sales analysis codes: see how each department is performing in your reports
- Staff can easily and quickly take bookings that automatically reserve rooms, staff, equipment and products required for each booking, with all cost data being passed directly to KCPOS till software to take payment, and any special offers or discounts set up will be applied.

In addition, bookings can also be made by selecting the member of staff required for a particular product. This will display available dates and times for that product with that member of staff.

All bookings made will automatically reserve the time in the necessary staff's diary. Operators (subject to their security access) will be able to view staff diaries for a specified time frame, showing details of what products have been booked with dates, times and member details of the client. Operators can also be granted the ability to print diaries for either particular members of staff or for specific departments, within a specified date range.
